Education

University of Toronto | Engineering Science - Bachelor of Applied Science (BASc) | GPA: 3.8/4.0 **2019-2023**

- Candidate for Bachelor of Applied Science (BASc) – Engineering Science
- Relevant Courses: Introduction to Programming (4.0), Algorithms & Data Structures (4.0)

Work Experience

OrangeTopi **May 2020 – Present**

Lead Software Engineer Intern *Sunnyvale, California*

- Led a team of **8 – 10 developers** by providing guidance on **React Native**, reviewing code, approving PR's, and leading product demos
- Developed **50%+** of the **React Native** mobile app for **Android** and **iOS** in a fast-paced environment, including **Expo**, app notifications, and authentication with the **React Context API**
- Developed multiple algorithms and functions in the **Node.js** and **Express.js** backend, including all payment and email handling functions
- Reduced deployment time by over **90%** by implementing a **CI/CD** pipeline for automatic deployment

Delovery **March 2020 – June 2020**

Software Engineer Intern *Sunnyvale, California*

- Built a **Python** web scraper using **Beautiful Soup** to scrape **915 data points** and graphed the data using **Matplotlib**
- Designed and developed several major frontend components with **React.js**, including the entire cart user flow, including retrieving data from mock APIs and the **Node.js** backend API
- Created an API using **Node.js** and **Express.js** to handle all payment processing with Braintree Payments

Projects / Accomplishments

GPT-3 for Finance **July 2020**

- Built a program to create and fill **20+ fields** in a balance sheet based on natural statements, using the **OpenAI GPT-3 NLP API** and the Google Sheets API
- Used **Git** for coordination of work by creating branches, PRs, and reviewing code

Spark Plug, NewHacks 2020 **March 2020**

- Built a web app in **under 24 hours** using **HTML** and **CSS** to create the UI and **Javascript** to send POST and GET requests to the **ParseHub API** to scrape Kijiji Autos for cars matching specific criteria

HyperBot, UofTHacks VII 2020 **January 2020**

- Won **1st** out of **70** teams by building the best healthcare chatbot (**Hypercare API** prize)
- Used **Google Cloud App Engine** and **Python Flask** to host the backend and receive POST requests from webhooks and **Google Firebase** to store and update a **Firestore** database using **JSON** files
- Used **Hypercare API** to receive and send messages, schedule appointments, and find other doctors
- Used a Python **ELMo** module to preform **NLP** on user input and map it to a symptom to produce a diagnosis

HootGuard, Hack the North 2019 **September 2019**

- Created an **Android** app in **Java** that detects drowsy driving, with successful testing on 8+ users, using **CameraX** library to retrieve image of face and **ML Kit** from the **Google Firebase API** for facial recognition

Data Science/ML Learning Project **January 2020 – March 2020**

- Developed **KNN (k-Nearest Neighbors)** algorithm in **Python 3** with **90%+ accuracy** using the Iris dataset
- Fitted the Iris dataset to a **Decision Tree Classifier** using **scikit-learn** and achieved **92% accuracy**

Skills

- **Languages:** Python, Java, C, C++, HTML, CSS, JavaScript, ES6, JSX, MATLAB
- **Technologies:** React.js, React Native, Node.js, Express.js, Python Flask, Google Cloud, Google Firebase, Git, Android Studio, Expo
